COURSES FOR GEOGRAPHY

**Geography Courses**

**GY101 Atmospheric Proc & Patterns**

* N

Hours 4

Three hours lecture and one two-hour laboratory period. Earth-space relations, latitude and longitude, seasons, time, weather, climate, and vegetation. Particular attention is given to the causes of weather and climate and why they tend to be different from place to place.

Natural Science

**GY102 Earth Surface Processes**

* N

Hours 4

Three hours lecture and one two-hour laboratory period. Study of earth-surface processes, with consideration of human interaction with the physical environment. Subjects include landforms, water resources, soils, and mapping the physical environment.

Natural Science

**GY105 World Regional Geography**

* SB

Hours 3

Introduction to geography through a survey of the world’s major geographic regions. Examines their physical and cultural features, economies, and populations.

Social and Behavioral Sciences

**GY110 People, Places, and Environment**

* SB

Hours 3

Introduction to geography as a science for learning the fundamentals of human behavior and decision making. Examines how human events, natural resources, economies, development, and urbanization impact the way humankind lives, organizes its space, and makes decisions for the future.

Social and Behavioral Sciences

**GY200 Principles Of Planning**

Hours 3

Survey of the basic elements of regional and urban planning. Provides a comprehensive overview of the planning profession.

**GY202 The Water Planet**

* N

Hours 4

This course is about water on earth, and the content will integrate scientific elements from the disciplines of atmospheric science, geography, geology, hydrology, oceanography, and water resources. The course is organized based on the large-scale elements of the hydrologic cycle and the smaller-scale elements of the water balance concept, especially as they affect water resources.

Natural Science

**GY204 Map & Air Photo Interpretation**

Hours 4

Three hours lecture and one two-hour laboratory period. Fundamentals of map reading and interpretation.

**GY207 Field Studies in Water and Climate**

* N

Hours 4

Water is one of the most abundant, yet most precious, natural resources on Earth. Its movement and properties are determined by processes occurring within and across many geosystems, including rivers, lakes, glaciers, groundwater, and climate systems. This course explores how different components of Earth’s water system operate and the processes linking the components together. We will also explore how people modify and utilize Earth’s water systems. Our course will be based in Innsbruck, Austria, a geographic location with a variety of water systems, including glaciers, which have very strong ties to Earth’s climate system. We will take fieldtrips to local glaciers and rivers to examine how water systems operate in the “real world” and learn techniques used to measure and understand how these systems change over space and time. We will also take fieldtrips to Prague, Czech Republic and Munich, Germany to better understand how humans modify water systems, through processes such as river regulation. GY 207 is designated a natural science (NS) course.

Natural Science

**GY230 Geographic Information Systems**

* C

Hours 3

This course will offer practical GIS training for non-geography majors. It will focus on geospatial data representation and analysis in ArcGIS.

Prerequisite(s): CS 102

Computer Science

**GY302 Climatology**

Hours 3

Introduce the fundamentals of the earth-atmosphere system as they comprise the climate of Earth, drive spatial and temporal climate variability, and impact life.

Prerequisite(s): GY 101

**GY317 Natural Hazards**

Hours 3

Examination of the causes, consequences, and spatial distribution of climatic, geomorphic, and human-induced natural hazards.

Prerequisite(s): GY 101 or GY 102
GY330 Computer Mapping Graphics
  C
  Hours 4
  Three hours lecture and one two-hour laboratory period. Introduction to
computer graphics and their application in both the natural and social
sciences, with special emphasis on mapping. Computing proficiency is
required for a passing grade in this course.
  Prerequisite(s): GY 204 and CS 102

Computer Science

GY339 Natural Resource Environmental Planning
  Hours 3
  Analyzes human interactions with the physical environment and ways of
dealing with them. Integrates environmental science, social science, and
planning, and includes environmental impact assessment.

GY341 Geography of the United States and Canada
  Hours 3
  Study of the physical and human geography of the United States and
Canada.

GY344 Geography of Africa
  Hours 3
  Study of the physical and human geography of Africa.

GY345 Geography of Latin America
  Hours 3
  This course is designed to provide a regional survey of Latin America’s
environments and peoples from a geographic perspective. The course
presents the physical landscape as well as the changing environment in
Latin America. The course then explores the major historical, cultural,
and economical aspects of the region. The course will have an emphasis
in processes that shape the major contemporary issues, such as
development, urbanization, and environmental change.

GY346 Geography of Europe
  Hours 3
  This course is designed to provide a regional survey of Europe in terms of
economic activities and the physical environment. Special emphasis is
on the historical development of European landscapes.

GY351 Geography of Alabama
  Hours 3
  Study of the varied geographical dimensions of the state of Alabama,
both past and present.

GY358 Urban Geography
  Hours 3
  Examines the growth of cities, their spatial distributions, internal
dynamics, functional bases, and social and political patterns.
  Prerequisite(s): GY 110

GY363 Geomorphology
  Hours 3
  Study of physical, chemical and biological processes operating at the
Earth’s surface and landforms, and the landscapes such processes
develop.
  Prerequisite(s): GY 102 or GEO 101

GY365 Industrial Development and Location
  W
  Hours 3
  Systematic study of the principles and processes underlying the
development, location, and spatial organization of economic activities
from both a national and international perspective. Writing proficiency
within this discipline is required for a passing grade in this course.
  Prerequisite(s): GY 110

Writing

GY370 Special Topics
  Hours 3
  No description available

GY375 Sports Geography
  Hours 3
  Sports are an important part of society and contribute billions of dollars
to the global economy. This course examines the geographic dimensions
of sports, primarily in North America, with some reflections on Europe for
contrast. The geography of sports can be analyzed through the use of
concepts found in a variety of human geography subdisciplines, including
cultural, historical, economic, population, urban, and political geography.
The course covers a variety of topics and helps students develop a
holistic view of sports with regards to spatial interactions. Geography
courses explain why things are where they are on the surface of the
Earth. In other words, students develop a spatial perspective in thinking
about their surroundings.

GY377 Cultural Geography
  Hours 3
  Study of the way in which culture influences elements of both physical
and human landscapes with emphasis on how cultures are spread over
space and how cultures make sense of space.
  Prerequisite(s): GY 105 or GY 110

GY385 Watershed Management Plan Development
  Hours 3
  This course is designed to be primarily an experiential course and will
address development and implementation of a Watershed Management
Plan. The North River Watershed Management Plan will be used as
a working model and students will review theory before carrying out
experiential learning in the field.

GY404 Physical Geography of the Southeast
  Hours 3
  A study of the physical landscapes in the southeastern United States.
Emphasis is on the geological setting, geomorphic features, climate,
soils, and vegetation, and the interrelationships of these conditions that
shape the landscape in this region.
  Prerequisite(s): GY 101 and GY 102; or GEO 101

GY405 Directed Research in Physical Geography
  Hours 1-3
  Hands-on, problem solving in the field of physical geography.

GY406 Directed Research in Human Geography
  Hours 1-3
  Hands-on, problem solving in the field of human geography.
GY409 Forest History and Restoration
Hours 4
This course covers the theories, tools and techniques used in historical ecology with a focus on the establishment of reference conditions for habitat conservation and restoration efforts.
Prerequisite(s): GY 101 or GY 102

GY410 The Geography of National Parks
Hours 3
This course is devoted to the changing geography of the national park system and protected areas, with an emphasis on their design, planning, and operations.
Prerequisite(s): GY 110

GY412 Hydroclimatology
Hours 3
To provide a basic understanding of the waters of Earth, especially with relation to the effects of precipitation and evaporation upon the occurrence and character of water in streams, lakes and on or below the land surface.
Prerequisite(s): GY 101 and GY 302

GY413 Applied Climatology
Hours 3
Applied Climatology is a graduate/senior level course designed to expand upon fundamental concepts learned in GY 101. Within this broad field, a specific focus in GY 413 concentrates upon climate and human health/behavior, and human modification of climate. The course contains a mixture of lecture, lab, and field assignments.
Prerequisite(s): GY 101

GY414 Climate Change and Health
Hours 3
This course is an introduction to the effect of global climate change on health. The course will be taught from a geographical perspective and will introduce students to the physical science of climate change and the impact it has on health through discussion of extreme weather events, altered ecological systems, and threats to human security and welfare. Discussion will build on the core concepts of climate change science to provide students with a solid foundation to further examine a variety of topics from acute impacts such as heat waves and other weather extremes to chronic conditions such as shifting disease vector habitats, degraded air quality, and food security. Direct correlations between health impacts and climate change will be emphasized throughout as will discussion of mitigation and adaptation strategies.
Prerequisite(s): GY 101

GY415 The Geography of Extinctions and Endangered Species
Hours 3
This course examines the individuals, institutions, research, controversies, and policies that have developed around wildlife extinction, ecological problems associated with extinction, and endangered species. The course also examines the stories of several lost or vanishing species. This course, which has been developed out of the instructor's current research projects, uses lectures, readings, student-led discussions, writing assignments, and one exam to explore how humans have contributed to, while at the same time grappling with, the issue of wildlife conservation and extinction.

GY416 Extreme Weather and Society
W
Hours 3
EW&S is an integrated physical and social science seminar class consisting of readings, discussion, and lectures on perception, understanding, and communication of severe weather hazards.
Prerequisite(s): GY 101

Writing

GY420 Remote Sensing I
C
Hours 4
Three hours lecture and one two-hour laboratory period. Introduction to the basic principles of electromagnetic radiation, interaction between energy and earth features, remote sensing instruments, and information extraction from remotely sensed data. Computing proficiency is required for a passing grade in this course.
Prerequisite(s): GY 204 and CS 102

Computer Science

GY424 Cartography Practicum
Hours 3-9
Individual work experience in cartography, supervised by faculty and staff of The University of Alabama. A maximum of 3 hours of internship or practicum credit can be applied to the geography major. Credit for GY 424 cannot be applied to the geography minor.

GY425 Cartography Internship
Hours 3-9
Individual work experience on a cartographic project, supervised by the staff of an off-campus agency. A maximum of 3 hours of internship or practicum credit can be applied to the geography major. Credit for GY 425 cannot be applied to the geography minor.

GY430 Intro Geographic Info Systems
C
Hours 1,3
Three hours lecture and one hour laboratory period. Introduces the basic concepts of GIS, including definition and components of GIS, spatial data structures, data sources, data input, manipulation and analysis, applications of GIS, and managing GIS. Computing proficiency is required for a passing grade in this course.
Prerequisite(s): GY 204 and CS 102

Computer Science

GY431 GIS in Emergency Management
Hours 4
Addresses geo-spatial data, methods, and software used in mitigation, planning, response, and recovery phases of emergency management. Case studies and scenarios are drawn from meteorological, environmental, geological, and biological hazards and disasters.
Prerequisite(s): GY 430
GY432 Spec Research in Geog  
Hours 1-4  
No description available

GY433 GIS Practicum  
Hours 3-9  
Individual work experience in GIS, supervised by the faculty and staff of The University of Alabama. A maximum of 3 hours of internship or practicum credit can be applied to the geography major. Credit for GY 433 cannot be applied to the geography minor.

GY434 GIS Internship  
Hours 3-9  
Individual work experience in GIS, supervised by the staff of an off-campus agency. A maximum of 3 hours of internship or practicum credit can be applied to the geography major. Credit for GY 434 cannot be applied to the geography minor.

GY435 Remote Sensing II  
C  
Hours 4  
Three hours lecture and one two-hour laboratory period. Analysis and extraction of thematic information from nonphotographic remotely sensed data for geographic information systems. Topics include image processing, image enhancement, and image classification. Computing proficiency is required for a passing grade in this course.  
Prerequisite(s): GY 420  
Computer Science

GY436 Adv Geographic Info Syst  
C  
Hours 4  
Three hours lecture and one two-hour laboratory period. Evaluation of case studies, spatial model development, and database design for geographic information systems. Computing proficiency is required for a passing grade in this course.  
Prerequisite(s): GY 430  
Computer Science

GY437 GIS for Transportation  
Hours 4  
The application of Geographic Information Systems to transportation has resulted in a sub-field known as GIS-T. This course will provide a hands-on introduction to GIS-T.  
Prerequisite(s): GY 204

GY438 Application Issues in GIS  
Hours 4  
Three hours lecture and one two-hour laboratory period. In-depth study of various topics in the application and technical issues of geographic information systems. Computing proficiency is required for a passing grade in this course.  
Prerequisite(s): GY 430

GY439 GIS Programming  
Hours 4  
This course focuses on the extension of geographic information systems (GIS) through programming as well as on the development of stand-alone algorithms for spatial analysis and numerical modeling.  
Prerequisite(s): GY 230 (proposed) or GY 430

GY440 Commun Facil Planning  
W  
Hours 3  
Principles, processes, and analysis of public facility location planning, with emphasis on the spatial search process, impact analysis, and public facility location models.  
Writing

GY441 Land Use Regulations  
Hours 3  
Theory and use of zoning, eminent domain, taxing and police powers, enabling acts, charters, official maps, codes, nuisance ordinances, and environmental impact statements in community planning.  
Prerequisite(s): GY 200

GY442 GIS in Biogeography  
Hours 4  
Addresses the application of GIS data and methods in analyzing geographic distribution and trends of plants and animals. Labs draw data and methods from a variety of biogeographic contexts including historical, modern, terrestrial, marine, conservation, and climate change.  
Prerequisite(s): GY 430

GY444 Field Studies in Africa  
Hours 6  
Three-week intensive field study in Ghana. Explores geographical perspectives on Africa’s level of development and the responses of the African peoples to their circumstances.

GY450 Conservation Field Studies in Belize  
Hours 4  
Study Belize’s diverse rainforests, coral reefs, and visit Mayan ruins for a glimpse into a past civilization. Belize is unique in that it still contains relatively undisturbed rainforests and the longest barrier reef in the Western Hemisphere. However, while Belize has emerged as an international leader regarding conservation efforts, threats from climate change, poverty, and development still exist. The purpose of this course is 1) examine current conservation efforts to safeguard this biodiversity; 2) familiarize students with the most important aspects of tropical lowland terrestrial and marine ecosystems; 3) understand the role of local culture in sustainable conservation; 4) gain an understanding of the fundamental importance of biodiversity; and 5) expose students to new and unique cultures and environments. The course is designed for students who are interested in conservation issues, biogeography, marine sciences, ornithology and birding, archaeology, and outdoor adventures.  
Prerequisite(s): GY 102

GY452 Environ Decision Making  
Hours 3  
Review of the history of natural resources in the U.S. and current environmental topics, followed by discussion of techniques to facilitate environmental decision making and management.
GY453 Environment & Society

Hours 3
Exploration of the linkages between the biophysical environment and human social systems. Public policy implications are viewed from a social science perspective. Writing proficiency within this discipline is required for a passing grade in this course.

Prerequisite(s): GY 110

Writing

GY454 Costa Rica Field Studies: Tropical Ecology, Conservation, and Development

Hours 4
This program will provide students with a broad interdisciplinary experience encompassing tropical ecology, conservation and development (TECD) in a highly experiential learning context.

GY455 Planning Practicum

Hours 3-9
Individual work experience in planning, supervised by faculty and staff of The University of Alabama. A maximum of 3 hours of internship or practicum credit can be applied to the geography major. Credit for GY 455 cannot be applied to the geography minor.

GY456 Planning Internship

Hours 3-9
Individual work experience in planning, supervised by the staff of an off-campus agency. A maximum of 3 hours of internship or practicum credit can be applied to the geography major. Credit for GY 456 cannot be applied to the geography minor.

GY458 Urban Planning And Analysis

Hours 3
A study of contemporary urban landscapes, political and economic power structures, and resultant conflicts. Includes an in-depth analysis of the role of externalities, the urban planner, urban policymaking, and analytical methods in the planning and administration of urban landscapes.

Writing

GY460 Environmental Management

Hours 3
Introduces students to the impact of humans on the planet and the patterns of human behavior necessary to preserve and manage the environment in a self-sustaining manner. Emphasis is on writing and speaking.

Prerequisite(s): GY 101

GY463 Ecosystem Services: Theory and Practice

Hours 4
This course will prepare students to function effectively as future researchers and policy-makers on topics related to sustainability and sustainable management of ecosystem-oriented projects and activities. The concept of ecosystem services provides one approach to facilitate trade-off decision making to identify win-win strategies among multiple stakeholders with often conflicting near-term objectives.

GY465 Region Planning Analysis

Hours 3
Principles and processes of regional planning and the analytical methods appropriate for solving regional planning problems. Case studies and the role of the planner in the regional planning process are discussed.

GY466 Transport Geography

Hours 3
Examines the location and function of the multimodal North American transportation system, the urban transportation planning process and methodologies. Assesses the political and environmental contexts of transport systems, including impacts of continued reliance on the automobile.

Prerequisite(s): GY 105 or GY 110, or instructor permission

GY470 Special Topics

Hours 3
No description available.

GY472 Soil Science

Hours 4
Three hours lecture and required field and lab work. Introduction to the study of soils, including soil formation, classification, and the interpretation of soils to reconstruct environmental histories.

GY473 Public Policy Development in Water Resources

Hours 3
This course will evaluate the current approaches to policy theory and examine systematically the broader implications of the substantive aspects of public policy development in the water resources spectrum. In analysis of public policy development in water resources, the student will look at both policy process and policy substance. Attention will be given to the questions of how and why water policy differs across states, and how one might evaluate policy performance cross-nationally.

Prerequisite(s): GY 101 and GY 102; or GEO 101

GY477 Water Resources Management, Law, and Policy

Hours 3
The Water Resources Management, Law, and Policy course will provide students with a survey of water resources development, control, law, policy and management with particular emphasis on public policy considerations including: the acquisition and exercise of water rights—appropriative and riparian; groundwater management; water districts and user organizations; environmental considerations; Federal/State relations including interstate allocation; and the Alabama Water Resources Act. The course will also address international water law—the multinational treaties, laws, cases, practices and politics governing Earth’s transboundary freshwater resources (watercourses including rivers, streams, lakes, and groundwater aquifers) shared by two or more countries.

Prerequisite(s): GY 101 and GY 102; or GEO 101

GY483 Environment Science Internship

Hours 3-9
Individual work experience in environmental science, supervised by the staff of an off-campus agency. A maximum of 3 hours of internship or practicum credit can be applied to the geography major. Credit for GY 483 cannot be applied to the geography minor.
Courses for Geography

GY485 River Hydrology
Hours 3
Rivers are dynamic natural systems that are of great importance to ecosystems and society. This course examines river hydrology processes from a physical geography perspective. A major theme of the course will be impacts of human actions on river systems.
Prerequisite(s): GY 101 or GY 102

GY486 Watershed Dynamics
W
Hours 3
An examination of the physical operation of watersheds focusing on surface water hydrology, erosion, and sedimentation. Writing proficiency within this discipline is required for a passing grade in this course.
Prerequisite(s): GY 102

GY489 Forest Ecology Veg Analy
W
Hours 4
Three hours lecture and required field work. Study of the nature of forest communities and the interrelationship of organisms that compose them.

GY490 Geography Internship
Hours 3-9
Work experience in an agency involved in geographical analysis. A maximum of 3 hours of internship or practicum credit can be applied to the geography major. Credit for GY 490 cannot be applied to the geography minor.

GY491 Fluvial Geomorphology
W
Hours 3
This course provides an in-depth investigation of the processes that determine the form and evolution of rivers and streams. Questions addressed by this course include the following. What processes determine the form and evolution of rivers and streams? How can we infer process from form and vice versa? How do river form and process vary spatially and temporally? What principles of fluvial geomorphology are needed for river restoration and management? The course will combine lectures, discussions, field data collection, and modeling activities. This course can be taken for writing credit. Therefore, TWO INDIVIDUAL writing assignments are required. In order to earn a passing grade in this course, you will be required to demonstrate writing proficiency to standards expected for the geosciences. A student who does not write with the skill normally required of an upper division student in the geosciences will not be given a passing grade, no matter how well they perform on other course components.
Prerequisite(s): GY/GEO 363 Geomorphology

GY492 Eastern Forest Communities and Silvics
Hours 4
This field course is focused on the biotic and abiotic elements that create distinct forest communities throughout the eastern US, with a particular emphasis on woody plant assemblages including the silvics of dominant and indicator species in different community types. Applications to forest management are stressed.
Prerequisite(s): GY 101 or GY 102 or BSC 114

GY493 Plant Geography
Hours 4
This course covers basic biotic and abiotic terrestrial ecosystem components, environmental gradients, plant distribution patterns, dispersal, colonization, and migration, disturbance processes, and applications to biodiversity conservation.
Prerequisite(s): GY 101 or GY 102 or BSC 114

GY494 Forest Measurement & Analysis
Hours 4
This course is designed to provide students with a theoretical foundation and practical experiences in measuring, inventorying, and describing trees, stands, and forests.
Prerequisite(s): GY 101 or GY 102 or BSC 114 or BSC 116

GY495 Coastal Geomorphology
Hours 3
The coastlines of the world, at the triple interface of land, sea, and air, are dynamic geomorphic environments. They are often subject to abrupt changes, associated with storms for example, as well as slower, long-term changes, such as those associated with sea level change. Coastal environments are home to most of the earth's human population and they include, at the same time, some of the most hazardous of locations. The purpose of this course is to provide a general introduction to the subject of coastal geomorphology, with emphasis on coastal environments and landforms, and with a survey of coastal processes.

GY496 Forest Ecosystem Management: Silviculture
Hours 4
In this course silviculture is treated as applied forest ecology. The goal of this course is to provide students with a knowledge of silviculture and its ecological basis so they can design manipulations in forest ecosystems to achieve a range of management objectives. The course requires field trips to tour different sites and visit with forest scientists and managers. In this course students learn about tree growth and stand development and use this information to develop silvicultural prescriptions to meet a diverse range of management goals. We will explore how silvicultural treatments can influence stand structure and composition and how these changes influence timber quantity and quality, forest health, biodiversity, soil, and wildlife habitat among other features. We will also focus on how silviculture is influenced by broader social, economic, and ecological issues.
Prerequisite(s): GY489 or GY409 or GY492 or GY494 or instructor permission
