COURSES FOR COMPUTER SCIENCE

Computer Science Courses

**CS100 CS I for Majors**

**Hours 4**

A first course in programming for students majoring in computer science. Language concepts include primitives, variables, sequences, function, selection, iteration and recursion. Software engineering concepts include testing and debugging. System concepts include directories, paths, files, and text editing.

Prerequisite(s): (MATH 112 and MATH 113) or MATH 115 or UA ACT Subject Math Placement 565 or UA Placement Mathematics 440

Prerequisite(s) with concurrency: MATH 125 or MATH 126 or MATH 145 or MATH 146

**CS101 CS II for Majors**

**C**

Hours 4

A second course in programming for students majoring in computer science. Using a high-level language, students use object-oriented practices to study fundamental data structures and algorithms. Issues such as computability, problem complexity and algorithm analysis, efficient searching and sorting, data structures, and the object-oriented programming paradigm are introduced and explained. Computing proficiency is required for a passing grade in this course.

Prerequisite(s): (CS 100 or CS 110 or RRS 102) and (MATH 125 or MATH 145)

Computer Science

**CS102 Computer Applications**

**C**

Hours 3

Familiarization with Windows, fundamental and intermediate word processing commands, spreadsheet applications, and database management. Computing proficiency is required for a passing grade in this course.

Computer Science

**CS104 Computer Science Principles**

**C**

Hours 3

An introductory course that overviews the core principles of computer science from a broad spectrum of topics. The course content is focused on computing and its relation to creativity, abstraction, algorithms, programming, Big Data, Internet/networking, and societal impact. Students will work on team-based projects that explore topics in Big Data, investigate the impact of the Internet, and create their own games and/or smartphone applications. Students will use the graphical programming language Snap. Computing proficiency is required for a passing grade in this course.

Prerequisite(s) with concurrency: MATH 112 or MATH 115 or MATH 125 or MATH 126 or MATH 145 or MATH 146

**CS110 Honors CS I for Majors**

**UH**

**Hours 4**

This course covers the same material as CS 100 but in a depth appropriate for honors students. It is an honors version of the first course in programming for students majoring in computer science. Prior knowledge of programming is not required, but the course is appropriate for students with prior programming experience. Language concepts include primitives, variables, sequences, function, selection, iteration and recursion. Software engineering concepts include testing and debugging. System concepts include directories, paths, files, and text editing.

Prerequisite(s): (MATH 112 and MATH 113) or MATH 115 or UA ACT Subject Math Placement 565 or UA Placement Mathematics 440

Prerequisite(s) with concurrency: MATH 125 or MATH 126 or MATH 145 or MATH 146

University Honors

**CS111 Honors CSII for Majors**

**UH**

**Hours 4**

This course covers the same material as CS 101 but in a depth appropriate for honors students. It is an honors version of the second course in programming for students majoring in computer science. Using a high-level language, students use object-oriented practices to study fundamental data structures and algorithms. Issues such as computability, problem complexity and algorithm analysis, efficient searching and sorting, data structures, and the object-oriented programming paradigm are introduced and explained.

Prerequisite(s): (CS 110 or CS 100 or RRS 102) and (MATH 125 or MATH 145)

University Honors

**CS121 The Discipline of Computing**

**Hours 1**

An introduction to the discipline of computing designed for students who are considering a major or minor in computer science.

Prerequisite(s): MATH 112 OR higher OR UA Math Placement Test Score of 370

Prerequisite(s) with concurrency: MATH 112

**CS140 Introduction to Cyber Security**

**Hours 3**

This course provides an introduction to cyber security. It covers fundamental concepts necessary to understand the threats to security as well as various defenses against those threats. The material includes an understanding of existing threats, planning for security, technology used to defend a computer system, and implementing security measures and technology.

Prerequisite(s): CS 100
CS200 Software Design and Engineering
C
Hours 4
Introduction to software engineering: the software crisis, program life cycle, software systems analysis techniques, software modeling, theory and practice of design, program testing methodologies, programmer team organization, and program verification and synthesis. Computing proficiency is required for a passing grade in this course.
Prerequisite(s): CS 101 or CS 111

Computer Science

CS201 Data Structures and Algorithms
C
Hours 4
Data structures including balanced search trees, heaps, hash tables, and graphs. Algorithm design techniques including divide-and-conquer, greedy method, and dynamic programming. Emphasis on problem solving, design, analysis, and reasoning about data structures and algorithms. Computing proficiency is required for a passing grade in this course.
Prerequisite(s): (CS 101 or CS 111) and MATH 301

Computer Science

CS202 Web Foundations
C
Hours 3
Introduces the student to the fundamentals of the internet and web page design and development. Students will be shown how to use the internet, text editors, and build basic web pages using HTML coding. This will include, but not be limited to hyperlinks, tables, basic CSS styling, frames and forms. The student will also be given demonstrations and assignments using a WYSIWYG editor. Computing proficiency is required for a passing grade in this course.

Computer Science

CS285 Intro to Spreadsheet Applications
C
Hours 3
Use of spreadsheets and other environments to build business and scientific applications. Course includes development of problem-solving skills and an introduction to the object-oriented paradigm. Computing proficiency is required for a passing grade in this course.

Computer Science

CS300 Operating Systems
Hours 3
Study of basic operating system concepts with an emphasis on memory, processor, device, and information management.
Prerequisite(s): CS 200, CS 201

CS301 Database Management Systems
W
Hours 3
Constituent parts of database management (design, creation, and manipulation of databases), including the conceptual and relational data models, SQL, normalization and security. Writing proficiency is required for a passing grade in this course. A student who does not write with the skill normally required of an upper-division student will not earn a passing grade, no matter how well the student performs in other areas of the course.
Prerequisite(s): CS 200 and CS 201

Writing

CS302 Database Applications
C
Hours 3
An introduction to commercial database packages. Students will gain familiarity with both creating and using standard database software packages to solve real-world problems. Computing proficiency is required for a passing grade in this course.

Computer Science

CS305 Advanced Database Applications and Design
C
Hours 3
This course is a follow-up course to CS 302 for non-majors wishing to learn more about the design and use of database systems. Now that the underpinnings of data, data representation, and data visualization are in place from CS 302, students will undertake an investigation into the uses of data and the construction of and understanding of databases design principles. Computing proficiency is required for a passing grade in this course.
Prerequisite(s): CS 302 with a grade of C- or higher

Computer Science

CS312 Website Design
C
Hours 3
A course designed to teach website design principles and implementation techniques. The course requires prior knowledge of the fundamentals of the internet and web page design and development. This class is not cross-listed as a graduate course. Computing proficiency is required for a passing grade in this course.
Prerequisite(s): CS 202 with a grade of C- or higher

Computer Science

CS322 Python Programming
C
Hours 3
A course designed to introduce programming and problem solving using Python. This class is not cross-listed as a graduate course. Computing proficiency is required for a passing grade in this course.
Prerequisite(s): MATH 112 or higher

Computer Science
CS340 Legal & Ethical Issues in Comp
C
Hours 3
By way of case study, the course finds and frames issues related to legal
and ethical issues in computing. Topics include privacy, free speech,
intrale property, security, and software reliability and liability issues.
Computing proficiency is required for a passing grade in this course.

Computer Science
CS345 Advanced Legal and Ethical Issues in Computing
C
Hours 3
By way of case study and fact pattern analysis, we will find and frame
advanced legal and ethical issues presented by past, contemporary
and emerging technology. Cases and events will be examined. At
the conclusion of the semester, students will be able to identify and
discuss legal and ethical issues presented by technology. Students will
create a seminal project showcasing their understanding of a chosen
issue as well as the student's ability to use computing technology to
communicate, share and display their work. Computing proficiency is
required for a passing grade in this course.
Prerequisite(s): CS 340 with a grade of C- or higher

Computer Science
CS347 Cyber Law and Ethics
HU
Hours 3
We will analyze advanced legal and ethical issues confronting the usage
of new technologies and how these issues impact society. We will
examine past, contemporary and emerging cases that have a connection
to computing technology. Human values and ethics will be at the
forefront of our approach, and we will study the intersection of human
values, law and professional ethics.
Prerequisite(s): CS 100 or CS 322

Humanities
CS385 Advanced Spreadsheet Applications
C
Hours 3
Design and construction of standard user interfaces using a visual
programming environment. Course includes the prototyping of several
standard user interface mechanisms. Computing proficiency is required
for a passing grade in this course.
Prerequisite(s): CS 285 with a grade of C- or higher

Computer Science
CS391 Special Topics
Hours 3
Special topics in computing.

CS393 Software Practicum
Hours 3
Software development course designed to meet the needs of individual
students. This course is specifically for students developing software for
an enterprise, such as those at The Edge Incubator and Accelerator.
Prerequisite(s) with concurrency: CS 301

CS403 Programming Languages
Hours 3
Formal study of programming language specification, analysis,
implementation, and run-time support structures; organization of
programming languages with emphasis on language constructs and
mechanisms; and study of non-procedural programming paradigms.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS404 CS Curriculum for Math Educators
Hours 3
Building upon the concepts from CS 104, students will explore in-depth
how computer science education is presented in the secondary education
setting. Students will get the opportunity to explore current computer
science curriculum and develop resources for future teaching, with a
specific emphasis on the College Board’s AP CS Principles (AP CSP)
curriculum.
Prerequisite(s): CS 104

CS407 Software Interface Design
Hours 3
Basic concepts of human-computer interaction, including guidelines for
interface design, evaluation of interface designs, virtual environments,
menus, forms, natural language interactions, novel interaction devices,
information search and information visualization.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS415 Software Design & Development
Hours 3
Object-oriented design and development using UML and Java, design
patterns, and architectural patterns.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS416 Testing and Quality Assurance
Hours 3
Study of verification & validation and related processes. Topics
include techniques and tools for software analysis, testing, and quality
assurance.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS417 Requirements Engineering
Hours 3
Study of requirements engineering and it's phases. Topics include formal,
semi-formal, and informal paradigms for elicitation, documentation, and
management of software system requirements.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS420 Software Evolution
Hours 3
Study of techniques and tools for design-time and run-time software
adaptation, including principles of reflection and metaprogramming,
software modularity, metamodeling and software language engineering.
Prerequisite(s): CS 300, CS 301 and ECE 383
CS428 Computer Security
Hours 3
An examination of computer security concepts, such as cryptographic tools, user authentication, access control, database security, intrusion detection, malicious software, denial of service, firewalls and intrusion prevention systems, trusted computing and multilevel security, buffer overflow, software security, physical and infrastructure security, human factors, and security auditing.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS434 Compiler Construction
Hours 3
Syntax and semantics of procedure-oriented languages and translation techniques used in their compilation; includes computer implementation.
Prerequisite(s): CS 300, CS 301, and ECE 383

CS435 Computer Graphics
Hours 3
Fundamentals of interactive 3-D computer graphics, including modeling and transformations, viewing, lighting and shading, mapping methods, graphics pipeline, shading languages, and interaction techniques. Programming projects are required.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS438 Computer Comm & Networks
Hours 3
The study of the issues related to computer communications. Topics include physical topologies, switching, error detection and correction, routing, congestion control, and connection management for global networks (such as the Internet) and local area networks (such as Ethernet). In addition, network programming and applications will be considered.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS442 Cryptography
Hours 3
This course will cover algorithms and concepts in cryptography and data security. We will undertake an examination of algorithms and concepts in cryptography and data security, such as symmetric ciphers, asymmetric ciphers, public-key cryptography, hash functions, message authentication codes, key management and distribution, etc.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS443 Digital Forensics
Hours 3
Digital Forensics is an area of study that is rapidly growing in importance and visibility. It involves preserving, identifying, extracting, documenting and interpreting digital data. Though sometimes misunderstood, digital forensics is like other types of investigation. With the continuous rise of computer-related incidents and crimes, and the increased emphasis on homeland defense in this country, there is a growing need for computer science graduates with the skills to investigate these crimes. This course will introduce the topics of computer crime and digital forensics. Students will be required to learn different aspects of computer crime and ways in which to uncover, protect and exploit digital evidence.
Prerequisite(s): CS 300, CS 301, and ECE 383

CS444 Software Security
Hours 3
This course is an introduction to software security principles and practices. Topics for this course will include but not be limited to security architectures, defensive programming, web security, secure information flow, and common software vulnerabilities.
Prerequisite(s): CS 300, CS 301, and ECE 383

CS445 Software Reverse Engineering
Hours 3
Software Reverse Engineering is an area of study that is rapidly growing in importance and visibility. This course will reveal to students the challenges of monitoring and understanding software systems. During the course students will become familiar with the practice of software reverse engineering files by utilizing static and dynamic techniques, and methods in order to gain an understanding as to what impact a file may have on a computer system.
Prerequisite(s): CS 300, CS 301, and ECE 383

CS448 Network Security
Hours 3
Concepts concerning network security, including an examination of network security concepts, algorithms, and protocols.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS451 Data Science
Hours 3
This course introduces fundamental concepts & techniques in data science as well as develops practical skills for data analysis in real-world applications. Given the multi-disciplinary nature of data science, the course will primarily focus on the advantages and disadvantages of various methods for different data characteristics, but will also provide some coverage on the statistical or mathematical foundations. Topics to cover include data preprocessing, data exploration, relationship mining, prediction, clustering, outlier detection, deep learning, spatial and spatiotemporal data analysis, text data analysis, and big data.
Prerequisite(s): CS 300, CS 301, MATH 237, (MATH 355 or GES 255), ECE 383

CS452 Information Retrieval
Hours 3
This course is an introduction to information retrieval principles and practices. The course will cover several aspects of Information Retrieval including; indexing, processing, querying, and classifying data. Also, retrieval models, algorithms, and implementations will be covered. Though the class will focus primarily on textual data, other media including images/videos, music/audio files, and geospatial information will be addressed. Topics for this course will include but not be limited to: text processing and classification, web search development techniques, and document clustering.
Prerequisite(s): CS 300, CS 301, ECE 383
CS455 Social Media Data Analytics
Hours 3
The world is experiencing rapid growth in the amount of published data which come from different sources, including Social Media platforms. The availability of programming interfaces to these platforms allows for near real-time processing of these data for various purposes. This course will reveal to students the inherent challenges of analyzing Social Media data and introduce tools and techniques that are available to address them.
Prerequisite(s): CS 300, CS 301, and ECE 383

CS460 Intro to Autonomous Robotics
Hours 3
Issues involved with the implementation of robot control software including motion, kinematics, simulation testing, sensor incorporation and unmodeled factors.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS461 Brain Computer Interface
Hours 3
This course involves the exploration of new forms of Human-Computer Interaction (HCI) based on passive measurement of neurophysiological states (cognitive and affective). These include the measurement of cognitive workload and affective engagement.

CS465 Artificial Intelligence
Hours 3
The advanced study of topics under the umbrella of artificial intelligence including problem solving, knowledge representation, planning and machine learning.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS470 Computer Algorithms
Hours 3
Construction of efficient algorithms for computer implementation.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS475 Formal Languages & Machines
Hours 3
Regular expressions and finite automata. Context free grammars and pushdown automata. Recursively enumerable languages and the Turing machine. The Chomsky hierarchy.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS480 Computer Simulation
Hours 3
Introduction to simulation and use of computer simulation models; simulation methodology, including generation of random numbers and variants, model design, and analysis of data generated by simulation experiments.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS481 High Performance Computing
Hours 3
This course provides students with knowledge and fundamental concepts of high performance computing as well as hands-on experience of the core technology in the field. The objective of this class is to understand how to achieve high performance on a wide range of computational platforms. Topics include: optimizing the performance of sequential programs based on modern computer memory hierarchies, parallel algorithm design, developing parallel programs using MPI, analyzing the performance of parallel programs.
Prerequisite(s): (CS 300, CS 301 and ECE 383) or permission of instructor.

CS491 Special Topics
Hours 3
Formal courses that cover new and innovative topics in computer science and do not yet have their own course numbers. Specific course titles will be announced from time to time.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS492 Special Prob (Area)
Hours 1-3
Reading and research course designed to meet the needs of individual students. This course cannot be used as a required 400-level computer science elective.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS493 Special Problems in Software Engineering
Hours 3
Reading, research, and development course designed to meet the needs of individual students. This course is specifically for students pursuing the Software Engineering Concentration.
Prerequisite(s): CS 300, CS 301 and ECE 383

CS494 CyberCorps Scholarship For Service Seminar
Hours 1
The CyberCorps© Scholarship for Service (SFS) Seminar is only for the students in the SFS@Bama program. This course will focus on important information necessary to be successful in a government cyber security career. The CyberCorps© SFS program prepares the next generation of cyber security employees to protect and defend the United States of America's infrastructure from threats, attacks, and potential intrusions. The course will include briefings, presentations, job related tasks, job fairs, and guest speakers.

CS495 Capstone Computing
W
Hours 3
A culminating capstone project course that integrates the skills and abilities throughout the curriculum into a comprehensive design and development experience for computer science majors. Writing proficiency is required for a passing grade in this course. A student who does not write with the skill normally required of an upper-division student will not earn a passing grade, no matter how well the student performs in other areas of the course.
Prerequisite(s): (CS 403 or CS 470 or CS 475) Minimum Grade of C- AND three additional hours of 400-level CS classes
Writing
CS499 Undergraduate Thesis Research
Hours 3
Independent research and participation within a faculty member's research group. Permission of the supervising faculty member is required.
Prerequisite(s): (CS 403 or CS 470 or CS 475) Minimum Grade of C- AND three additional hours of 400-level CS classes

CS503 Programming Languages
Hours 3
This course provides a graduate level presentation of Programming Languages. Formal student of programming language specification, analysis, implementation, and run-time support structures; organization of programming languages with emphasis on language constructs and mechanisms; and study of non-programming paradigms. Students who have successfully completed CS 403 may not also receive credit for CS 503.

CS504 CS Curriculum for Math Education
Hours 3
Building upon the concepts from CS 104, students will explore in-depth how computer science education is presented in the secondary education setting. Students will get the opportunity to explore current computer science curriculum and develop resources for future teaching, with a specific emphasis on the College Board's AP CS Principles (AP CSP) curriculum.
Prerequisite(s): CS 104 or permission by instructor.

CS507 Software Interface Design
Hours 3
Concepts of the human-computer interface, emphasizing the software aspects. Dialog styles, form models, user documentation and the evaluation of human-computer software interfaces. Students who have successfully completed CS 407 may not also receive credit for CS 507.

CS515 Software Design and Development
Hours 3
Object-oriented design and development using UML and Java, design patterns, and architectural patterns.
Prerequisite(s): CS 200, CS 201, and ECE 383 each with a minimum grade of C-

CS516 Testing and Quality Assurance
Hours 3
Study of verification & validation and related processes. Topics include techniques and tools for software analysis, testing, and quality assurance. Students who have successfully completed CS 416 may not also receive credit for CS 516.

CS517 Requirements Engineering
Hours 3
Study of requirements engineering and its phases. Topics include formal, semi-formal, and informal paradigms for elicitation, documentation, and management of software system requirements. Students who have successfully completed CS 417 may not also receive credit for CS 517.

CS520 Software Evolution
Hours 3
Study of techniques and tools for design-time and run-time software adaptation, including principles of reflection and metaprogramming, software modularity, metamodeling and software language engineering.

CS526 Intro Operating Systems
Hours 3
This course provides a graduate level presentation of Introduction to Operating Systems. Study of basic operating system concepts with an emphasis on memory processor, device, and information management.
Prerequisite(s): CS 200, CS 201 and ECE 383 with a minimum grade of C-

CS528 Computer Security
Hours 3
An examination of computer security concepts, such as cryptographic tools, user authentication, access control, database security, intrusion detection, malicious software, denial of service, firewalls and intrusion prevention systems, trusted computing and multilevel security, buffer overflow, software security, physical and infrastructure security, human factors, and security auditing. Students who have successfully completed CS 428 may not also receive credit for CS 528.

CS534 Compiler Construction
Hours 3
This course provides a graduate level presentation of Compiler construction. Syntax and semantics of procedure-oriented languages and translation techniques used in their compilation; includes computer implementation.

CS535 Computer Graphics
Hours 3
Display memory, generation of points, vectors, etc. Interactive versus passive graphics, analog storage of images on microfilm, etc. Digitizing and digital storage, pattern recognition by features, syntax tables, and random nets. The mathematics of three dimensions, projections, and the hidden-line problem. Students who have successfully completed CS 435 may not also receive credit for CS 535.

CS538 Computer Comm & Networks
Hours 3
This course provides a graduate level presentation of Computer Communications and Networks. The student of the issues related to Computer communications. Topics include physical topologies, switching, error detection and correction, routing, congestion control, and connection management for global networks (such as the Internet) and local area networks (such as Ethernet). In addition, network programming and applications will be considered. Students who have successfully completed CS 438 may not also receive credit for CS 538.

CS542 Cryptography
Hours 3
This course will cover algorithms and concepts in cryptography and data security. We will undertake an examination of algorithms and concepts in cryptography and data security, such as symmetric ciphers, asymmetric ciphers, public-key cryptography, hash functions, message authentication codes, key management and distribution, etc.
CS543 Digital Forensics
Hours 3
Digital Forensics is an area of study that is rapidly growing in importance and visibility. It involves preserving, identifying, extracting, documenting and interpreting digital data. Though sometimes misunderstood, digital forensics is like other types of investigation. With the continuous rise of computer-related incidents and crimes, and the increased emphasis on homeland defense in this country, there is a growing need for computer science graduates with the skills to investigate these crimes. This course will introduce the topics of computer crime and digital forensics. Students will be required to learn different aspects of computer crime and ways in which to uncover, protect and exploit digital evidence.

CS544 Software Security
Hours 3
This course is an introduction to software security principles and practices. Topics for this course will include but not be limited to security architectures, defensive programming, web security, secure information flow, and common software vulnerabilities.

CS545 Software Reverse Engineering
Hours 3
Software Reverse Engineering is an area of study that is rapidly growing in importance and visibility. This course will reveal to students the challenges of monitoring and understanding software systems. During the course students will become familiar with the practice of software reverse engineering files by utilizing static and dynamic techniques, and methods in order to gain an understanding as to what impact a file may have on a computer system.

CS548 Network Security
Hours 3
Concepts concerning network security, including an examination of network security concepts, algorithms, and protocols.

CS551 Data Science
Hours 3
This course introduces fundamental concepts & techniques in data science as well as develops practical skills for data analysis in real-world applications. Given the multi-disciplinary nature of data science, the course will primarily focus on the advantages and disadvantages of various methods for different data characteristics, but will also provide some coverage on the statistical or mathematical foundations. Topics to cover include data preprocessing, data exploration, relationship mining, prediction, clustering, outlier detection, deep learning, spatial and spatiotemporal data analysis, text data analysis, and big data.
Prerequisite(s): MATH 237 with a grade of C- or higher; (MATH 355 or GES 255) with a grade of C- or higher

CS552 Information Retrieval
Hours 3
This course is an introduction to information retrieval principles and practices. The course will cover several aspects of Information Retrieval including, indexing, processing, querying, and classifying data. Also, retrieval models, algorithms, and implementations will be covered. Though the class will focus primarily on textual data, other media including images/videos, music/audio files, and geospatial information will be addressed. Topics for this course will include but not be limited to: text processing and classification, web search development techniques, and document clustering.

CS555 Social Media Data Analytics
Hours 3
The world is experiencing rapid growth in the amount of published data which come from different sources, including Social Media platforms. The availability of programming interfaces to these platforms allows for near real-time processing of these data for various purposes. This course will reveal to students the inherent challenges of analyzing Social Media data and introduce tools and techniques that are available to address them.

CS557 Database Management Systems
Hours 3
This course provides a graduate level presentation of Database Management Systems. Constituent parts of database management (design, creation, and manipulation of databases), client-server, relational, and object-oriented data models.
Prerequisite(s): CS 200, CS 201, and ECE 383 each with a minimum grade of C-.

CS560 Introduction To Autonomous Robotics
Hours 3
Issues involved with the implementation of robot control software including motion, kinematics, simulation testing, sensor incorporation and unmodeled factors. Students who have successfully completed CS 460 may not also receive credit for CS 560.
Prerequisite(s): CS 300 or CS 426

CS561 Brain Computer Interface
Hours 3
This course involves the exploration of new forms of Human-Computer Interaction (HCI) based on passive measurement of neurophysiological states (cognitive and affective). These include the measurement of cognitive workload and affective engagement.

CS565 Artificial Intelligence
Hours 3
The advanced study of topics under the umbrella of artificial intelligence including problem solving, knowledge representation, planning and machine learning.

CS567 Computer Systems Architecture
Hours 3
Computer architectures, computer design, memory systems design, parallel processing concepts, supercomputers, networks, and multiprocessing systems.

CS570 Computer Algorithms
Hours 3
This course provides a graduate level presentation of Introduction to Computer Algorithms. Construction of efficient algorithms for computer implementation. Students who have successfully completed CS 470 may not also receive credit for CS 570.

CS575 Formal Languages & Machines
Hours 3
Regular expressions and finite automata. Context free grammars and pushdown automata. Recursively enumerable languages and turing machine. The Chomsky hierarchy. Students who have successfully completed CS 475 may not also receive credit for CS 575.
CS580 Computer Simulation
Hours 3
Introduction to simulation and use of computer simulation models; simulation methodology, including generation of random numbers and variants, model design, and analysis of data generated by simulation experiments. Students who have successfully completed CS 480 may not also receive credit for CS 580.

CS581 High Performance Computing
Hours 3
This course provides students with knowledge and fundamental concepts of high performance computing as well as hands-on experience of the core technology in the field. The objective of this class is to understand how to achieve high performance on a wide range of computational platforms. Topics include: optimizing the performance of sequential programs based on modern computer memory hierarchies, parallel algorithm design, developing parallel programs using MPI, analyzing the performance of parallel programs.

CS591 Special Topics in CS
Hours 3
Formal courses that cover new and innovative topics in computer science and do not yet have their own course numbers. Specific course titles will be announced.

CS592 Independent Study
Hours 1-12
This course requires a written proposal that must be approved by the sponsoring faculty member before registration.

CS598 Non-Thesis Research
Hours 1-6
No description available

CS599 Thesis Research
Hours 1-6
This independent research course partially fulfills required master's-level research thesis hours toward the master's degree in Computer Science. The course is conducted under the guidance of the thesis advisor. Material covered will be of an advanced nature aimed at providing master’s students with an understanding of the latest research and current developments within the field. Discussion and advisor guidance will be directed towards readings of research articles and development of research methodology, with the aim of producing an original research contribution that represents a novel development in the field, or a novel perspective on a pre-existing topic in the field.

CS600 Foundations of Software Engineering
Hours 3
Introduction to formal software development techniques; theoretical foundations of specification, design, and testing; and programming methodologies and software reuse.

CS602 Advanced Formal Languages and Machines
Hours 3
Regular languages, context-free languages, recursive and recursively enumerable languages, nondeterminism, and undecidability.
Prerequisite(s): CS 475 or CS 575

CS603 Organization of Computer Languages
Hours 3
Design and implementation of programming languages; syntax and translation; semantic structures and run-time representations; data, operations, control structures, and storage management.
Prerequisite(s): CS 403 or CS 503
Prerequisite(s) with concurrency: CS 403

CS605 Artificial Intelligence
Hours 3
An advanced course in artificial intelligence topics. These topics include, but are not limited to, topics such as problem solving, knowledge representation, planning, and machine learning. The course will examine the various branches within the field as well as applications of artificial intelligence.

CS606 Analysis of Operating Systems
Hours 3
Design of operating systems; advanced examination of synchronization, deadlock, virtual memory, and security; and parallel and distributed systems.
Prerequisite(s): CS 300

CS609 Database Management
Hours 3
An advanced view of database management systems, addressing both practical and theoretical aspects of database systems. The implementation and performance of the relational and NoSQL models will be examined, along with system techniques associated with transaction processing and recovery. Distributed databases, database security, and databases in clouds will also be discussed.
Prerequisite(s): CS 301
Prerequisite(s) with concurrency: CS 457

CS612 Advanced Data Structures
Hours 3
A graduate-level study of data structures. Topics include self-balancing trees binomial and Fibonacci heaps, disjoint sets, graphs and digraphs.
Prerequisite(s): CS 470 or CS 570

CS613 Advanced Computer Communication & Networks
Hours 3
Study of computer networks, including telecommunications and related data transmission techniques. Network philosophy, design, and implementation.
Prerequisite(s): CS 438 or CS 538

CS618 Wireless Mobile Network Protocol
Hours 3
Network protocol design and analysis in wireless and mobile networks. Topics include ad hoc.
Prerequisite(s): CS 438 or CS 538 or CS 613 or ECE 406 or ECE 506 or ECE 502

CS630 Empirical Software Engineering
Hours 3
Introduction to empirical research methods in software engineering. Focus on measuring processes and designing experiments.
CS691 Special Topics
Hours 3

Formal courses that cover new and innovative topics in computer science and do not yet have their own numbers; specific course titles will be announced.

CS692 Independent Study
Hours 1-12

This course requires a written proposal that must be approved by the sponsoring faculty member before registration.

CS699 Dissertation Research
Hours 1-12

This independent research course partially fulfills required doctoral-level research dissertation hours toward the Ph.D. degree in Computer Science. The course is conducted under the guidance of the dissertation advisor. Material covered will be of an advanced nature aimed at providing doctoral students with an understanding of the latest research and current developments within the field. Discussion and advisor guidance will be directed towards readings of research articles and development of research methodology, with the aim of producing an original research contribution that represents a novel development in the field, or a novel perspective on a pre-existing topic in the field.
